

Figure 4. Percentages of Uznyi Oleni Ostrov/Popovo (black) and Bolshoy Oleni Ostrov (white) haplotypes matched in selected modern (A, B) and ancient (C, D) Eurasian population pools. The haplotype sharing analysis graph allows visualising the current distribution of the ancient haplotypes from Uznyi Oleni Ostrov/Popovo and Bolshoy Oleni Ostrov in modern populations from three main geographical regions: the Near-East/Caucasus, Europe, East Siberia (A, B). For each modern population, the number of occurrences of each haplotype from a given ancient population was divided by the modern population sample size (N = 500). The corresponding percentages of shared haplotypes are represented by a black bar for Uznyi Oleni Ostrov/Popovo haplotypes and by a white bar for Bolshoy Oleni Ostrov haplotypes. The same analyses were performed to compare the Uznyi Oleni Ostrov/Popovo and Bolshoy Oleni Ostrov haplotypes with haplotypes previously described in ancient populations (C, D). Figures A and C were constructed considering all haplotypes sequenced in the populations of Uznyi Oleni Ostrov/Popovo and Bolshoy Oleni Ostrov, whereas uninformative basal haplotypes were discarded in figures B and D. See Material and Methods for population abbreviations.
