

**Figure 4. Percentages of Uznyi Oleni Ostrov/Popovo (black) and Bolshoy Oleni Ostrov (white) haplotypes matched in selected modern (A, B) and ancient (C, D) Eurasian population pools.** The haplotype sharing analysis graph allows visualising the current distribution of the ancient haplotypes from Uznyi Oleni Ostrov/Popovo and Bolshoy Oleni Ostrov in modern populations from three main geographical regions: the Near-East/Caucasus, Europe, East Siberia (A, B). For each modern population, the number of occurrences of each haplotype from a given ancient population was divided by the modern population sample size ( $N = 500$ ). The corresponding percentages of shared haplotypes are represented by a black bar for Uznyi Oleni Ostrov/Popovo haplotypes and by a white bar for Bolshoy Oleni Ostrov haplotypes. The same analyses were performed to compare the Uznyi Oleni Ostrov/Popovo and Bolshoy Oleni Ostrov haplotypes with haplotypes previously described in ancient populations (C, D). Figures A and C were constructed considering all haplotypes sequenced in the populations of Uznyi Oleni Ostrov/Popovo and Bolshoy Oleni Ostrov, whereas uninformative basal haplotypes were discarded in figures B and D. See Material and Methods for population abbreviations.
